ACKNOWLEDGEMENT

We take this opportunity to express our sincere gratitude to all those who have supported and guided us throughout the development and completion of this Major Project.

We are deeply thankful to our Internal Guide, Prof. Khanjan Trivedi, Department of Computer Engineering, Faculty of Engineering & Technology, Marwadi University, Rajkot, for his valuable guidance, constructive suggestions, and continuous encouragement throughout the project.

We are grateful to the Head of Department, Prof. (Dr.) Krunal Vaghela, and all faculty members of the Department of Computer Engineering for providing us with the necessary facilities and academic support.

We also sincerely thank the management of Marwadi University for providing an excellent academic environment that enabled us to carry out this project effectively.

Finally, we express our heartfelt thanks to our family and friends for their constant moral support and motivation.

Safik Sherasiya, Nisar Badi, Azim Kadivar

Department of Computer Engineering, Marwadi University, Rajkot

ABSTRACT

The Smart Belongings Recovery System for Campus is a web-based application designed to simplify and secure the process of reporting, tracking, and recovering lost and found items within a campus. It provides a centralized platform where students can report lost or found belongings, upload images, track item status, and receive real-time notifications. The system includes a QR tag feature for registered smart gadgets, enabling quick identification without revealing personal details, along with OTP-based verification to ensure secure recovery. The application offers separate student and admin panels for managing reports, users, devices, and recovery processes. Built-in security features such as email verification, password hashing, session-based authentication, and role-based access improve efficiency, transparency, and security compared to traditional manual methods. Developed using HTML, CSS, JavaScript and Bootstrap for the frontend, PHP for backend processing, and MySQL as the database, the application runs on a XAMPP local server environment, making it a low-cost, campus-specific alternative to social media groups, generic lost-and-found portals, and expensive hardware trackers.

CHAPTER 1

INTRODUCTION

1.1 Background

Students often lose their belongings in places like classrooms, labs, and libraries. Finding and recovering these items can be difficult because there is no proper centralized system on most campuses. The Smart Belongings Recovery System for Campus provides one platform to report, track, and recover lost and found items. It also includes QR Tags for smart gadgets and OTP verification for secure recovery, giving students a faster and more reliable alternative to informal reporting methods such as social media groups and physical notice boards.

1.2 Problem Statement

Students face difficulties in finding lost items, protecting expensive gadgets, and tracking their recovery status. Delayed communication, lack of a centralized platform, and the absence of secure ownership verification make the recovery process difficult and unreliable. The following issues were specifically identified:

- Difficulty in locating and recovering lost belongings on campus.
- No centralized platform to report and track lost or found items.
- Lack of a quick and secure way to verify the rightful owner of a recovered item.
- Absence of QR-based identification for registered smart gadgets.
- No real-time notification system to inform students about status updates.

Therefore, a centralized and secure system is needed to make the campus lost-and-found process easier, faster, and more reliable.

1.3 Objectives

The primary objectives of this project are:

- To develop a centralized web-based platform for reporting, tracking, and recovering lost and found items on campus.
- To provide separate student and admin panels for managing reports, users, devices, and recovery operations.

- To implement a QR Tag feature for registered smart gadgets, enabling quick and privacy-preserving identification.
- To implement OTP-based ownership verification for secure recovery of items and devices.
- To provide in-app and email notifications for important status updates.
- To ensure system security through email verification, password hashing, session-based authentication, and role-based access control.

1.4 Scope

The scope of the Smart Belongings Recovery System for Campus includes:

- User registration with email verification and secure login with session management.
- Reporting of lost or found items with name, category, description, location, date, and photo.
- Tracking of item status from submission through recovery using a status timeline.
- QR-based identification and registration for smart gadgets.
- OTP-based ownership and device recovery verification.
- In-app and email notification system for important updates.
- An admin panel for managing users, items, devices, reports, and complaints.

The system is designed for a single college campus to connect students and administrative staff. Future scope may include a mobile application, SMS notifications, advanced analytics, and additional smart recovery features.

CHAPTER 2

LITERATURE REVIEW & EXISTING SYSTEMS

2.1 Literature Review

A study of existing lost-and-found systems and item-tracking methods was conducted to understand how campus communities currently handle misplaced belongings. The review covered social platforms, general-purpose lost-and-found portals, and commercial hardware trackers to identify the strengths and shortcomings of each approach before finalizing the design of the proposed system.

2.2 Existing Systems

2.2.1 Social Media Groups (WhatsApp & Facebook)

Many students rely on WhatsApp and Facebook groups to share information about lost or found items. While this allows quick sharing among peers, it does not provide a centralized recovery system, structured status tracking, or any way to securely verify ownership before handing over an item.

2.2.2 Standard Lost-and-Found Web Portals

Generic lost-and-found websites mainly depend on manual reporting and matching of items. They typically lack device-specific features, real-time notifications, and integration with a campus's student and admin structure.

2.2.3 Hardware Trackers (Tile & Apple AirTags)

Smart tracking devices such as Tile and Apple AirTags provide accurate hardware-based tracking but can be expensive for regular student use and are not designed for campus-wide lost-and-found reporting or administrative oversight.

These observations show the need for a centralized, low-cost system with QR-based gadget identification and secure recovery verification — the gap that the proposed system is designed to fill.

2.3 Comparison of Existing Systems

Table 2.1 compares the proposed Smart Belongings Recovery System for Campus with the existing approaches studied above.

Feature	Social Media Groups	Standard Web Portals	Hardware Trackers	Proposed System
Lost & Found Reporting	Yes	Yes	No	Yes
In-App Notifications	Limited	Limited / No	Yes	Yes
Centralized Admin Control	No	Yes	No	Yes
Item Status Tracking	No	Limited	Limited	Yes
QR-Based Gadget Identification	No	No	No	Yes
OTP Ownership Verification	No	No	No	Yes
Device Registration	No	Limited	Yes	Yes
Privacy Protection	Limited	Limited	Yes	Yes
Low-Cost Solution	Yes	Yes	No	Yes

Table 2.1: Comparison of Existing Systems

2.4 Research Gap

Based on the analysis of existing systems, the following research gaps were identified:

- No existing campus tool combines centralized reporting, QR-based gadget identification, OTP-secured recovery, and role-based admin control in a single platform.
- Social media and manual portals offer no secure and quick way to verify the rightful owner during recovery.
- Hardware trackers provide accurate tracking but are expensive and not integrated with a campus reporting workflow.
- Privacy protection is limited in most existing systems when sharing owner information during recovery.

CHAPTER 3

PROPOSED SYSTEM

3.1 Overview

The proposed Smart Belongings Recovery System for Campus is a centralized, student-focused web application built using standard web technologies. It combines lost-and-found reporting, QR-based smart-gadget identification, OTP-secured recovery, real-time notifications, and role-based dashboards into a single, easy-to-use platform for students and administrators.

3.2 System Features

Module	Description
Login & Registration	Users can create an account, verify their email, and log in securely with session-based authentication.
Student Dashboard	Displays reported items, status updates, notifications, and recent activity.
Report Lost/Found Item	Students can report an item with name, category, description, location, date, and photo.
My Items & Status Tracking	Students can view their reported items and track their current recovery status.
QR Tag for Smart Gadgets	Registered smart gadgets can be identified using a QR Tag to help start the recovery process.
Device Registration & Recovery	Students can register their smart gadgets and use OTP verification for secure recovery.
Notifications	Students receive in-app and email notifications when important item or recovery updates occur.
Profile Management	Users can update their personal details, profile picture, and password.
Admin Panel	Admins can manage users, items, devices, reports, complaints, and recovery operations.

Table 3.1: System Features and Modules

3.3 System Architecture & Diagrams

3.3.1 Use Case Diagram

Figure 3.1 illustrates the interactions between the two primary actors — Student/User and Admin — and the core use cases of the system, including login/registration, item reporting, device registration, status updates, and notifications.

Fig 3.1: Use Case Diagram

3.3.2 System Architecture / Workflow Diagram

The system follows a workflow in which the student logs in, accesses the dashboard, and uses features such as reporting items, tracking status, registering devices, and receiving notifications. The admin panel verifies and updates report status, manages users and devices, and triggers notifications, with all data persisted in a central database.

Fig 3.2: System Architecture / Workflow Diagram

3.3.3 Flowchart Diagram

Figure 3.3 shows the detailed flow of control from user login through item reporting, admin verification, status update, and notification delivery.

Fig 3.3: Flowchart Diagram

3.3.4 Gantt Chart Diagram

The project was planned and executed over a two-month schedule as shown in Figure 3.4, covering requirement analysis, system and database design, feature development, testing, and deployment.

Smart Belongings and Recovery System for Campus – 2 Month Gantt Chart

Fig 3.4: Gantt Chart Diagram

3.4 System Workflow

The application follows this workflow:

- Step 1: Student registers with name, email, and password; the account is activated after email verification.
- Step 2: Student logs in securely and lands on the personalized dashboard.
- Step 3: Student reports a lost or found item with category, description, location, date, and photo, or registers a smart gadget with a QR Tag.
- Step 4: The admin verifies the report and updates its status (Pending / Found / Recovered / Closed).
- Step 5: On a status change, the system sends in-app and email notifications to the student.
- Step 6: For device recovery, OTP-based verification confirms the rightful owner before handover.

3.5 Methodology (SDLC)

The system was developed following the Software Development Life Cycle (SDLC) methodology, structured into four phases:

- Requirement Analysis: Identified the problems students face when reporting, tracking, and recovering lost belongings and smart gadgets on campus.
- System Design: Designed the web application structure, including student and admin panels, centralized database, QR-based gadget identification, notifications, and OTP verification.
- Development: Developed the system using HTML, CSS, JavaScript, Bootstrap, PHP, and MySQL to securely manage users, items, devices, reports, and recovery data.
- Testing & Implementation: Tested core features such as item reporting, QR-based gadget identification, status tracking, notifications, authentication, and OTP-based ownership verification, and deployed the system for campus use.

CHAPTER 4

TOOLS & TECHNOLOGIES

4.1 Technology Stack

Layer	Technology Used
Frontend	HTML5, CSS3, JavaScript (ES6), Bootstrap
Backend	PHP (Server-side scripting)
Database	MySQL (via phpMyAdmin)
Local Server	XAMPP (Apache + MySQL)
Development OS	Windows

Table 4.1: Technology Stack

4.2 Frontend Technologies

The frontend is developed using HTML5, CSS3, JavaScript, and Bootstrap. HTML5 provides the structural foundation, CSS3 and Bootstrap handle styling and responsive layout, and JavaScript enables dynamic interactions such as QR code scanning and real-time status updates.

4.3 Backend Technology

PHP is used as the server-side scripting language for user authentication, session management, email verification, OTP generation and validation, data processing, form handling, and communication with the MySQL database.

4.4 Database

MySQL, managed via phpMyAdmin, is used as the relational database management system. The database contains tables for users, items, devices, notifications, and reports, with foreign key relationships maintaining referential integrity across the system.

4.5 Development Server

XAMPP provides the integrated Apache web server and MySQL server environment, enabling the full web application stack to run locally during development, testing, and demonstration.

CHAPTER 5

IMPLEMENTATION

5.1 Module Implementation

5.1.1 Login & Registration

The Login and Registration module authenticates users and controls secure access to the system. New users register with their name, email, phone number, and password. The system validates input, checks for duplicate email addresses, sends a verification link, and stores the password using bcrypt hashing. Only verified accounts can log in, after which a PHP session is created for the user.

5.1.2 Student Dashboard

The dashboard is the home page after login. It displays reported items, current status updates, recent notifications, and recent activity, giving the student a quick overview of their lost-and-found and device-recovery activity.

5.1.3 Report Lost/Found Item

Students can report a lost or found item by entering its name, category, description, location, date, and an optional photo. The report is stored with an initial status of 'pending' and becomes visible to the admin for verification.

5.1.4 My Items & Status Tracking

This module lists all items reported by the logged-in student along with a status timeline (Pending → Found → Recovered/Closed), allowing the student to track progress at any time.

5.1.5 QR Tag for Smart Gadgets

Registered smart gadgets are assigned a unique QR Tag. Scanning the tag identifies the registered device without revealing the owner's personal details, which helps whoever finds the device to initiate the recovery process securely.

5.1.6 Device Registration & Recovery

Students can register their smart gadgets with details such as brand, model, and serial number. When a registered device is found, OTP-based verification confirms the rightful owner before the device is handed over.

5.1.7 Notifications

The notification module sends in-app and email alerts to students when their report status changes or when a matching item/device is found, keeping them informed without requiring them to check the portal manually.

5.1.8 Profile Management

Students can view and update their personal information, including name, email, phone number, profile picture, and password.

5.1.9 Admin Panel

The admin panel allows administrators to manage users, verify and update item reports, manage registered devices, handle complaints, and trigger notifications, providing centralized oversight of the entire recovery process.

5.2 Database Design

The application database contains five core tables — users, items, devices, notifications, and reports — connected through foreign key relationships, as shown in the ER diagram below.

Fig 5.1: ER Diagram

5.2.1 Table: users

Field	Data Type	Key / Constraint	Description
id	INT(11)	PRIMARY KEY, AUTO_INCREMENT	Unique user identifier
full_name	VARCHAR(100)	NOT NULL	Full name of the student
email	VARCHAR(100)	UNIQUE, NOT NULL	Student email address
phone	VARCHAR(20)	—	Contact number
enrollment_no	VARCHAR(20)	—	University enrollment number
department	VARCHAR(50)	—	Student's department
password	VARCHAR(255)	NOT NULL	Bcrypt-hashed password
role	ENUM('student','admin')	DEFAULT 'student'	Access role
email_verified	TINYINT(1)	DEFAULT 0	Email verification flag
verification_token	VARCHAR(255)	DEFAULT NULL	Token used for email verification
profile_pic	VARCHAR(255)	DEFAULT NULL	Profile picture filename
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Account registration time

Table 5.1: Database Schema – users

5.2.2 Table: items

Field	Data Type	Key / Constraint	Description
id	INT(11)	PRIMARY KEY, AUTO_INCREMENT	Unique item report identifier
user_id	INT(11)	FK → users(id)	Student who filed the report
device_id	INT(11)	FK → devices(id)	Linked registered device (optional)
report_type	ENUM('lost','found')	NOT NULL	Type of report
item_name	VARCHAR(150)	NOT NULL	Name/title of the item
category	VARCHAR(50)	—	Item category
description	TEXT	—	Item description
location	VARCHAR(150)	—	Location lost/found

Field	Data Type	Key / Constraint	Description
item_date	DATE	—	Date item was lost/found
image	VARCHAR(255)	DEFAULT NULL	Uploaded item photo
status	ENUM('pending','found','recovered','closed')	DEFAULT 'pending'	Current recovery status
collection_details	TEXT	DEFAULT NULL	Instructions for item collection
verification_code	VARCHAR(10)	DEFAULT NULL	OTP for ownership verification
owner_verified_at	DATETIME	DEFAULT NULL	Timestamp of successful OTP verification
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Report creation timestamp

Table 5.2: Database Schema – items

5.2.3 Table: devices

Field	Data Type	Key / Constraint	Description
id	INT(11)	PRIMARY KEY, AUTO_INCREMENT	Unique device identifier
user_id	INT(11)	FK → users(id)	Owner of the device
brand	VARCHAR(50)	—	Device brand
model	VARCHAR(50)	—	Device model
serial_no	VARCHAR(100)	—	Device serial number
image	VARCHAR(255)	DEFAULT NULL	Device photo
qr_token	VARCHAR(255)	UNIQUE	Unique token encoded in the QR Tag
status	ENUM('active','lost','recovered')	DEFAULT 'active'	Current device status
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Device registration timestamp

Table 5.3: Database Schema – devices

5.2.4 Table: notifications

Field	Data Type	Key / Constraint	Description
id	INT(11)	PRIMARY KEY, AUTO_INCREMENT	Unique notification identifier
user_id	INT(11)	FK → users(id)	Recipient of the notification
item_id	INT(11)	FK → items(id)	Related item report
message	VARCHAR(255)	NOT NULL	Notification text
is_read	TINYINT(1)	DEFAULT 0	Read/unread flag
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Notification creation timestamp

Table 5.4: Database Schema – notificatio

5.2.5 Table: reports

Field	Data Type	Key / Constraint	Description
id	INT(11)	PRIMARY KEY, AUTO_INCREMENT	Unique complaint/report identifier
user_id	INT(11)	FK → users(id)	Student who filed the complaint
item_id	INT(11)	FK → items(id)	Related item
device_id	INT(11)	FK → devices(id)	Related device (optional)
type	VARCHAR(50)	—	Complaint type
message	TEXT	—	Complaint details
status	ENUM('open','resolved')	DEFAULT 'open'	Complaint status
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Complaint creation timestamp

Table 5.5: Database Schema – reports

CHAPTER 6

RESULTS

This chapter presents the working interface of the Smart Belongings Recovery System for Campus, covering both the student-facing and admin-facing screens.

6.1 Landing Page

The landing page introduces the platform and provides navigation to registration and login.

Fig 6.1: Landing Page

6.2 Registration Page

Students register with their name, email, phone number, and password. Passwords are stored using bcrypt hashing.

The screenshot shows the registration page for the 'Smart Belonging System'. The left sidebar is dark blue with the system name and a message: 'Tag it. Lose it less. Create your student account to start reporting lost items and generating QR tags for your gadgets.' The main area is light yellow and contains a 'Create your student account' form. The form includes fields for Full Name, Enrollment No., University Email Address, Phone Number, Department (a dropdown), and Password. A 'Create Account' button is at the bottom, with a link to 'Sign in' for existing users.

Smart Belonging System

Tag it. Lose it less.
Create your student account to start reporting lost items and generating QR tags for your gadgets.

6.3 Login Page

Registered students log in securely using their email and password, protected by session-based authentication.

The screenshot shows the login page for the 'Smart Belonging System'. The left sidebar is dark blue with the system name and a message: 'Welcome back to campus care. Sign in to report a lost item, track its status, or manage recoveries. Admin accounts sign in right here too — no separate panel needed.' The main area is light yellow and contains a 'Sign in to your account' form. The form includes fields for Email address and Password. There are checkboxes for 'Remember me' and a link for 'Forgot password?'. A 'Sign In' button is at the bottom, with a link to 'Register here' for new users.

Smart Belonging System

Welcome back to campus care.
Sign in to report a lost item, track its status, or manage recoveries. Admin accounts sign in right here too — no separate panel needed.

Fig 6.3: Login Page

6.4 Email Verification Page

New accounts must verify their email address via a verification link before they can log in.

Fig 6.4: Email Verification Page

6.5 User Dashboard Page

The dashboard shows the student's reported items, notifications, and recent activity at a glance.

Fig 6.5: User Dashboard Page

6.6 Report Lost/Found Item Page

Students report a lost or found item with category, description, location, date, and photo.

The screenshot shows the 'Report a Lost Item' page in the BelongingSystem. The left sidebar contains navigation links: Dashboard, Report Lost Item (active), My Items, My Devices, Notifications, My Profile, and Logout. The main content area has a header 'Report a Lost Item' with a subtitle 'Give as much detail as you can — it helps the admin match it faster' and a 'My Items' button. The form itself is titled 'What are you reporting?' and has two tabs: 'Lost Item' (active) and 'Found Item'. The form fields include: 'Item Name' (e.g. Blue Water Bottle), 'Category' (Select category), 'Description' (Color, brand, any identifying marks or stickers...), 'Last Seen Location' (e.g. Central Library, 2nd Floor), 'Date' (dd-mm-yyyy), and an 'Upload a Photo (optional)' section with a 'Click to upload' button and text 'PNG or JPG, up to 5MB'. At the bottom right are 'Cancel' and 'Submit Report' buttons.

Fig 6.6: Report Lost/Found Item Page

6.7 My Items Page

Students view all items they have reported along with their current recovery status.

The screenshot shows the 'My Items' page in the BelongingSystem. The left sidebar is the same as in Fig 6.6. The main content area has a header 'My Items' with a subtitle 'Track the status of everything you've reported' and a '+ Report Item' button. Below the header are filters: 'All (3)', 'Pending (1)', 'Found (0)', 'Not Found (1)', and 'Collected (1)'. A search bar 'Search your items...' is on the right. The items are listed in three rows: 1. 'apple watch' (MB108, Reported 07 Aug 2026) with status 'Not Found' and a timeline showing 'Reported' and 'Under Review'. 2. 'wallet' (Central Library, Reported 07 Aug 2026) with status 'Pending' and a timeline showing 'Reported' and 'Under Review'. 3. 'safari bag' (MC220 Lab, Reported 07 Aug 2026) with status 'Collected' and a timeline showing 'Reported' and 'Under Review'. Each item has a 'Closed' button at the end of its timeline.

CHAPTER 7

CONCLUSION & FUTURE SCOPE

7.1 Conclusion

The Smart Belongings Recovery System for Campus provides an easy and secure way for students to report, track, and recover lost items on campus while keeping the process centralized and organized for administrators. The QR Tag feature for smart gadgets makes identification easier, while OTP verification and notifications provide additional security and better communication between students and administrators. Overall, the system helps students recover their belongings faster and makes campus lost-and-found management significantly more efficient than existing manual or social-media-based methods.

7.2 Future Scope

While the current system covers the core requirements of a campus lost-and-found platform, several enhancements are planned for future versions:

- Development of a dedicated mobile application for Android and iOS.
- SMS-based notifications in addition to in-app and email alerts.
- Advanced analytics and reporting for administrators, including recovery-rate trends.
- Integration with institutional systems such as the campus ID card or LMS for faster identity verification.
- AI-based image matching to automatically suggest possible matches between lost and found reports.
- Cloud deployment to allow multi-campus support and remote access.
